Education

Hanoi University of Science and Technology
Bachelor's degree in Information Technology. GPA: 3.5

Hanoi, Vietnam
7/2024

Experience

Open-Source Collaborator, llama.cpp

5/2025 – now

- Currently a collaborator of **llama.cpp**, an open-source library that performs models inference (mostly LLMs) in C/C++. As of June 2025, this project achieves ~ 82000 stars in Github
- My contributions are mostly about supporting new text embedding and ranking models by converting them to GGUF format and writing their inference graphs.

Brains Technology

Tokyo, Japan

Software Engineer

11/2024 – now

- Develop ChatEI - a chatbot answering questions about in-house documents
- Optimize document indexing and retrieval: support non-text processing, diversify search methods, automate retrieval with agents.
- Increase the first response time from 3.5s to 2.5s (30% faster): optimizing search functions, accelerate the inference speed of the embedding model (using *llama.cpp*), enable caching.
- Participate in developing both server-side and UI.

Sun Asterisk Vietnam

Hanoi, Vietnam

AI Engineer Internship

5/2022 – 9/2023

- Surveyed and evaluated state-of-the-art deep learning architectures (CNNs, Transformers) for production readiness.
- Internal Taxpayer Verification Tool:
 - Developed a web interface for employees to upload tax documents and retrieve taxpayer information automatically.
 - Collected data and trained deep learning model to bypass the Captcha on the official taxpayer website. The accuracy of Captcha recognition is 93%.
 - Resulted in a 83% reduction in manual verification time.
- Talking Avatar POC: Created a proof-of-concept web platform to generate human-like talking head videos from text. Used pre-trained models for talking face animation (SadTalker) and speech synthesis (Tacotron2)

Projects

Graduation Thesis

- Developed an end-to-end system to crawl online newspapers every minute, preprocess and label data, and deploy text-to-speech models with five regional Vietnamese voices.

- Built voice pipelines: collected dialect-specific data, trained text-to-speech models, evaluated output, converted model to ONNX format for inference optimization, and containerized models for web deployment.
- Engineered a user-facing web interface that allows news-to-voice access, enhancing accessibility and tooling for Vietnamese news listeners.

Data Science Group Project

- Create a website to predict house renting price in Hanoi
- Everyday, the server recrawl new data, use that data to evaluate model. If data drift happens, retrain the model
- My work includes: Creating the crawler and evaluation pipeline, training, and deploying the prediction model

Skills & Interests

Technical: Git, Python (Pytorch, Tensorflow, FastAPI, Django, Flask), Flutter, NodeJS, Docker

Language: Japanese (Intermediate - JLPT N3), English (Advanced - IELTS 7.0, January 2022)

Interests: Playing chess, watching football
