Experience

avatarin

Tokyo, Japan

AI Team Lead (01/2026 – Present), AI Engineer (10/2025 – 01/2026)

- Lead a team of 4 engineers building production RAG and conversational AI systems.
- Designed and implemented a document processing and retrieval pipeline (parsing, chunking, vector database indexing, semantic search, reranking), reducing search operations by ~25% via caching and query filtering strategies.
- Built guided conversational agents for QA and flight-booking use cases using the Parlant framework; reduced LLM calls by 50% via custom optimization.
- Developed a two-layer text moderation system and optimized sidecar service with Rust tokenizer, achieving 20× higher throughput than Python Triton server.
- Designed request clustering and routing mechanisms to maximize KV-cache reuse in LLM servers, improving inference efficiency.

Open-Source Collaborator, llama.cpp

5/2025 – 8/2025

- Contributed to **llama.cpp**, a popular open-source C/C++ LLM inference engine (~100k GitHub stars).
- Added support for new embedding and ranking models by converting them to GGUF format and implementing their inference graphs.

Brains Technology

Tokyo, Japan

Software Engineer

11/2024 – 9/2025

- Built enterprise RAG-based products including *ChatEI* (document QA chatbot) and *Intelligent Search* (agent-based search strategy generator).
- Improved document indexing and retrieval by supporting multimodal inputs and automated retrieval workflows with agents.
- Reduced first-response latency from 3.5s to 2.5s (30% faster) via search optimization, embedding inference acceleration (using *llama.cpp*), and caching.
- Contributed to both backend services and UI development.

Sun Asterisk Vietnam

Hanoi, Vietnam

AI Engineer Internship

5/2022 – 9/2023

- Built an internal taxpayer verification tool with automated document upload and data extraction.
- Trained a deep learning model to bypass CAPTCHA on the official taxpayer portal (93% accuracy), reducing manual verification time by 83%.
- Developed a POC platform generating talking-head videos from text using SadTalker and Tacotron2.

Education

Hanoi University of Science and Technology

Hanoi, Vietnam

Bachelor's degree in Information Technology. GPA: 3.5

7/2024

Projects

Graduation Thesis

- Built dataset, trained dialect-specific (5 voices) TTS models and optimized inference via ONNX deployment and containerization.
- Built an end-to-end pipeline to continuously crawl online news, process data, and generate audios using Vietnamese text-to-speech models.

Skills & Interests

Technical: Git, Python (Pytorch, Tensorflow, FastAPI, Django, Flask), Flutter, NodeJS, Docker, Vector Databases, MongoDB

Language: Japanese (Intermediate - JLPT N3), English (Advanced - IELTS 7.0, January 2022)

Interests: Chess, football
